

IAP Midterm 3

1. Read an integer value corresponding to a person's age (in days) and print it in years, months and days. Note: only to facilitate the calculation, consider the whole year with 365 days and 30 days every month.

Example:

400	1 years 1 months 5 days
-----	-------------------------------

2. Find list of errors in the following program:

```
#include (iostream)
using namespace std

int main()
{
    a,b,sum,subtr int;
    a=100; b=20;
    sum=a+b;
    subtr=a-b;
    cout<<"sum"<<Sum<<endl;
    cout<<'subtr'<<subtr<<endl;
}
```
